EXPERIENCE

Software Engineer E2 — Backend Developer

Thinkitive Technologies

Nov 2023 – Present Pune, India

- Owned end-to-end development of **production microservices** for US-based healthcare clients, working across Django, FastAPI, Celery, and AWS.
- Designed and enforced **standardized REST API contracts** (consistent request/response schemas) across 20+ EHR integrations, ensuring reliability and maintainability at scale.
- Built **Celery + Redis** async pipelines for background tasks and RPA workflows, cutting manual processing effort by **40%**.
- Automated CI/CD using **Docker + GitHub Actions**, reducing release errors and improving deployment frequency.
- Conducted **query optimization and data modeling** for multi-tenant healthcare systems handling clinical records.

KEY PROJECTS

Ziva Health — EHR Integration Bridge Microservice

Thinkitive Technologies

- Architected a **multi-tenant EHR integration microservice** (Django/Python) that bridges Ziva Health’s platform with **20+ EHR systems** (Healthie, Elation, and others).
- Syncs patient records, SOAP notes, clinical documents, and appointments via **REST & GraphQL APIs** with **webhook-driven real-time data exchange**.
- Designed **configurable templates per clinic** enabling dynamic field mapping across heterogeneous EHR schemas without code changes.
- Enforced a **consistent request/response contract** across all EHR adapters — reducing integration bugs and onboarding time for new EHRs significantly.

Isabella AI — HIPAA-Compliant Healthcare AI Microservice

Thinkitive Technologies

- Built an **AI-powered FastAPI microservice** using **LangGraph + LangChain** that enables natural-language conversations between patients and healthcare providers.
- Integrated **LLM APIs** with structured clinical history (past notes, appointments, records) to generate context-aware, provider-specific responses.
- Designed with full **HIPAA compliance** — enforcing data isolation, audit logging, and secure handling of Protected Health Information (PHI).
- Implemented **stateful conversation graphs** via LangGraph, enabling multi-turn dialogue that maintains clinical context across sessions.

CCFood App — WhatsApp Food Ordering Backend

Thinkitive Project

- Built Django backend powering a **WhatsApp + SMS ordering flow** via Twilio with real-time order processing and **2FA restaurant onboarding APIs**.

TECHNICAL SKILLS

Languages & Frameworks

Python Django FastAPI REST APIs GraphQL OOP / SOLID

AI & LLM

LangGraph LangChain LLM APIs Agentic AI

Async & Databases

Celery Redis PostgreSQL SQL

DevOps & Cloud

Docker GitHub Actions CI/CD AWS EC2 AWS S3

Domain & Other

EHR Integration HIPAA Compliance Webhooks Multi-tenant SaaS Microservices RPA Twilio

CERTIFICATIONS

 **AWS Cloud Foundations**
AWS Academy Graduate

 **Django Essential Training**
LinkedIn Learning

 **Software Eng. Experience**
JPMorgan Chase & Co.

STRENGTHS

End-to-End Ownership Clean APIs HIPAA / Compliance System Thinking Fast Learner

EDUCATION

MCA

ATSS IICMR, SPPU
